

## EZ Mounts

### Product Information

Thank you for purchasing the ChaseCAM Mounts!

#### **CAUTION!!!**

**These mounts are designed to hold small lightweight cameras and camcorders. They are not intended for holding large size camcorders. We are not responsible for damage to your camera or your vehicle from using this device. Customer must take adequate precautions to insure that the camera is securely mounted and tethered. There is probably a ton of other legal stuff we should be saying here, but please, the main point is this, take responsibility for what you do. We don't condone any illegal activities. Use common sense!**

**READ THE INSTRUCTIONS!**

## **EZ Mounts**

This unit is designed to hold small lightweight cameras and camcorders. It is not intended for holding large sized camcorders. We are not responsible for damage to your camera or your vehicle from using this device. Customer must take adequate precautions to insure that the camera is securely mounted and tethered. There is probably a ton of other legal stuff we should be saying here, but please, the main point is this, take responsibility for what you do and we don't condone any illegal activities. Use common sense!

### **Installation**

**Make sure that *everything* is tightly screwed together. Most failures are from not tightening up the clamping knob on the swiveling knuckle.**

#### Mounting

Determine the proper position of the EZMount on the item it is being installed on. We suggest a "dry fit" with the camera installed if you are using a camcorder. To protect the finish on the mounting surface, use the supplied rubber sheet. The rubber sheet may be cut to fit, but overlapping the ends should not be a problem. Undo the stainless steel clamping bands and install them loosely over the mounting area. The bands will fit on the ends of the EZMount, inside the small screws on the very ends.

Tighten stainless steel bands.

Install swiveling knuckle onto the threaded stud.

Install camera onto the knuckle.

Adjust aim and if required, re-adjust the position of the EZMount. Tighten down the side clamping knob.

If you need more reach or flexibility, we do have extensions and articulating mounts that attach to your EZMount.
